NAME:*M.ABDULLAH* . ASSINGMENT NO:3

Neeche diye gaye sawalon ke mukhtasir jawab tayar karein:

Question no 1:

Python programming mein operators ka kya kirdar hai?

Operaters python ko batatay hain ke do values ka sath kya karna ha jaise plus karna ha ya multiply karna ha wagara wagara.

Question no 2:

Variable names ko Python ke naming rules ke mutabiq kyun hona chahiye?

Agar variable names Python ke naming rules ke mutabiq na hon to error aata hai aur Python samajh nahi pata.Is liye unka sahi hona zaroori hai.

Question no 3:

Python mein is aur == mein kya farq hai?

Is Is ka matlab ha ka donon variable ki value same location pa ha ya nai.

== Is ka matlab ha ka donon variable ki value same han ya nai.

Question no 4:

Python keywords kya hote hain? Aur inhein variable names ke tor par kyun nahi istemal kar sakte?

Keywords woh special words hain jo python ke khud ke rules aur commands hote hain.Agar ham keyword ko variable ka tor par istamalkaran ga to python ko samaj nai ayay gi ka ya us ka keywords han yan apkay variable han.

Question no 5:

Variable assignments mein dynamic typing ke examples dein.

Python mein aapko variable banate waqt uski type batana nahi padta.Python khud samajh leta hai ka is kikon si type ha Isi ko kehte hain dynamic typing.

x = 10   yahan x ek integer hai

print(type(x))

x = "Hello"   ab x string ban gaya

print(type(x))
